

## FATTORI Electric Embossing Machine T2E

### MODEL T2E

### Electrical Embossing Machine

This electric embossing machine is an advanced device designed for the rapid and efficient embossing of official documents and other materials. Equipped with a powerful electric motor, the T2E offers reliable and consistent performance, significantly reducing the manual effort required to perform the operation. Its sturdy and well-built structure ensures stability during use, while the ergonomic design ensures comfortable handling.

Thanks to its ability to handle a wide range of documents of different sizes and thicknesses, it is ideal for use in offices, government agencies, and businesses. It can work with various materials such as paper, cardboard, driver's licenses, passports, diplomas, certificates, and official documents.

The T2E can be equipped with an engraved stamp up to 68 mm in diameter and it can emboss from 1 to 25 sheets at a time, depending on the paper weight (grammage).

It's easily possible to adjust the embossing pressure according to the material or the number of documents you want to stamp.

Additionally, the machine operates very quietly, making it suitable for office environments.

The T2E also offers the flexibility to customize the stamp: if there is the need to emboss different logos, it's possible to interchange the stamps quickly and easily.

The upper stamp is engraved in steel and is much more resistant to time and wear compared to other models made of brass or plastic.

The positioning of the documents can be adjusted using the depth and the lateral mobile guides. The maximum insertion depth from the edge of documents is around 80 mm.

To emboss, the operator simply needs to press the start button or touch the documents to the microswitch, or use an optional pedal.

It features an automatic paper release system in case too many sheets are inserted, allowing the operator to resume normal operation.

It has an LCD screen that displays the number of embosses and the machine's working hours.

In order to avoid unauthorized uses of the machine the T2E is equipped with a safety key.

It has a system that automatically detects the voltage and can operate in all countries worldwide.

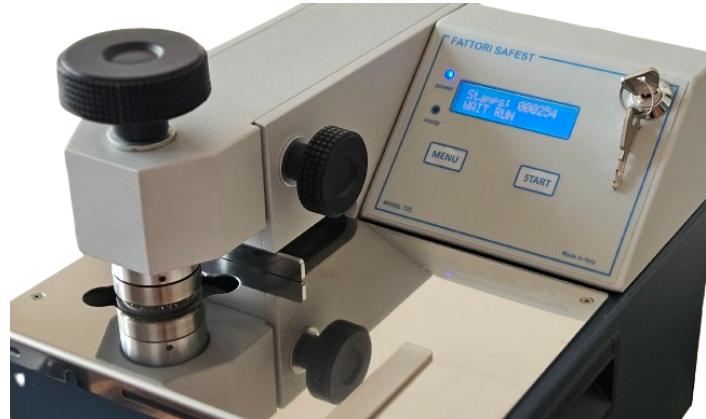

With its combination of high performance, ease of use, versatility, and quiet operation, the T2E proves to be a valuable tool for ensuring the security and authenticity of documents in various professional settings.

We offer a variety of perforators and embossers to fulfill your security requirements.
